DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a) because they fail to show a means for controlling the column counter (230) using the row counter (210), a means for controlling the row counter (210) using the column counter (230), or a means for adding an offset value in the offset memory (270) to the column count from column counter (230) *and to the synchronous counting value*, as described in the specification ([0043], [0044]). Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d).
2. The drawings are objected to because any operation supposed to be represented by the crossing of a conductor carrying the output of the unlabeled XOR gate at the top of Fig. 2 (which receives outputs of the column counter (230) and the offset memory (270) with conductors carrying the outputs of the row selectors (R[0]-R[k-1])) is not depicted in a recognizable or standard manner.
3. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate

changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

4. The disclosure is objected to because of the following informalities:

The description of Fig. 2 implies the two selection means in the bottom row (R[k-1]) serve no purpose as there is no selection, *i.e.* the input and output are apparently fixed and 1:1. There is no mention of exactly what parts of Fig. 2 are supposed to be the claimed "channels."

The purpose behind applying the term "synchronous counters" to certain counters (251, 252, ...) is not explained and appears to be confusing, as all of the counters are "synchronous" in one way or another, and as the column counter (230) is apparently the only counter that advances fully synchronously with each fundamental unit of data storage access in the interleaver memory (290). Accordingly it appears "synchronous counter(s)" should be "row-block synchronous counter(s)," or "row-block counter(s)" or the like.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

5. Claims 1-14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claims 1-6 and 8-13, "synchronous" appears to be confusing, for the reasons noted in the objection to the disclosure.

Regarding claims 3 and 10, "a column period ... corresponds to a synchronous signal" is unclear.

Regarding claims 5 and 12, "generated in combination of the row counting value, column counting value, and synchronous counting value" is poor syntax and thus unclear.

Regarding claims 6 and 13, "based on the column counting value to which the offset value is added and the synchronous counting value" is poor syntax and thus unclear.

Allowable Subject Matter

6. Claims 1-14 would be allowable if rewritten or amended to overcome the rejections under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
